

# Hodges Library — Scan Report

Date: 2026-01-02 (America/New\_York)

Scope: Local files in current workspace + contents of provided transfer packs and archives.

## Key Findings

- Transfer integrity verified: SION Transfer Pack files listed in its checksum manifest match size + SHA-256 + MD5.
- Architecture clarity: SAN is cleanly decomposed into Sion (orientation), Axiom (rule-forming / defensive policy), Norma (stabilizing reference frame). Norma pack exists separately, strengthening modularity.
- Closed-loop governance is explicit: INTAKE vs CANON + write-barrier phrases prevent accidental canonization and reduce 'echo-upgrading'.
- Visual provenance tooling exists: 'Sion Axiom Norma — Visual Art Library' is a curated index template designed to reference artwork by file hash (files stored separately).
- Archive gap: Hodges\_Codex\_v2.3\_Master\_Archive.zip currently contains only front matter + minimal integrated zip; it does not yet package the newer Curvature Trilogy PDFs/images. This looks intentional for IP safety, but is a backup risk.
- Manifest gap: SION checksum manifest lists 8 core files, but the transfer zip includes additional files (authorship record, visual art library). Consider updating manifest to include all shipped files for complete integrity checking.

## **Suggested Next Steps (No automatic commits)**

- Create an 'Axiom' transfer trio to match Norma: Axiom\_Master\_Index, Axiom\_System\_Description, Axiom\_Reference\_Library (descriptive, non-operational).
- Update master archive packaging: produce an off-system 'Library Pack' zip that includes the Curvature Trilogy PDF, Time Glyph, cover art, and the Visual Identity PDF, plus legal notices.
- Populate Visual Art Library index with the new Time glyph and covers, recording file hashes for provenance.
- Align version labels across front matter: ensure Title Page v2.3 references all current addenda and artifacts where appropriate (even if core mechanics remain redacted).
